Beans & Fritz's Holiday Homepage

Welcome to our homepage. Our names are Fritz and Beans. We are the canine wonder-dogs and faithful companions of David and Helene. This is our very first adventure into cyberspace and HTML homepage creation on the WWW. *Take a look around...*
Hope you enjoy it!

The problem with trees

Many systems are organised hierarchically. The CERNDOC documentation system is an example, as is the Unix file system, and the VMS/HELP system. A tree has the practical advantage of giving every node a unique name. However, it does not allow the system to model the real world. For example, in a hierarchical HELP system such as VMS/HELP, one often gets to a leaf on a tree such as

```
HELP COMPILER SOURCE_FORMAT PRAGMAS DEFAULTS
```

only to find a reference to another leaf: "Please see

```
HELP COMPILER COMMAND OPTIONS DEFAULTS PRAGMAS"
```

and it is necessary to leave the system and re-enter it. What was needed was a link from one node to another, because in this case the information was not naturally organised into a tree.

<http://www.w3.org/History/1989/proposal.html>

The problem with keywords

Keywords are a common method of accessing data for which one does not have the exact coordinates. The usual problem with keywords, however, is that two people never chose the same keywords. The keywords then become useful only to people who already know the application well.

Practical keyword systems (such as that of VAX/NOTES for example) require keywords to be registered. This is already a step in the right direction. A linked system takes this to the next logical step. Keywords can be nodes which stand for a concept. A keyword node is then no different from any other node. One can link documents, etc., to keywords. One can then find keywords by finding any node to which they are related. In this way, documents on similar topics are indirectly linked, through their key concepts. A keyword search then becomes a search starting from a small number of named nodes, and finding nodes which are close to all of them.

It was for these reasons that I first made a small linked information system, not realising that a term had already been coined for the idea: "hypertext".

<http://www.w3.org/History/1989/proposal.html>

A solution: Hypertext

<http://www.w3.org/History/1989/proposal.html>

World Wide Web

The WorldWideWeb (W3) is a wide-area [hypermedia](#) information retrieval initiative aiming to give universal access to a large universe of documents.

Everything there is online about W3 is linked directly or indirectly to this document, including an [executive summary](#) of the project, [Mailing lists](#) , [Policy](#) , November's [W3 news](#) , [Frequently Asked Questions](#) .

What's out there?

Pointers to the world's online information, [subjects](#) , [W3 servers](#), etc.

Help

on the browser you are using

Software Products

A list of W3 project components and their current state. (e.g. [Line Mode](#) ,[X11 Viola](#) , [NeXTStep](#) , [Servers](#) , [Tools](#) , [Mail robot](#) , [Library](#))

Technical

Details of protocols, formats, program internals etc

Bibliography

Paper documentation on W3 and references.

People

A list of some people involved in the project.

History

A summary of the history of the project.

How can I help ?

If you would like to support the web..

Getting code

Getting the code by [anonymous FTP](#) , etc.

proposed new tag: IMG

Marc Andreessen (marca@ncsa.uiuc.edu)

-

I'd like to propose a new, optional HTML tag:

IMG

Required argument is SRC="url".

This names a bitmap or pixmap file for the browser to attempt to pull over the network and interpret as an image, to be embedded in the text at the point of the tag's occurrence.

An example is:

```
<IMG SRC="file:///foobar.com/foo/bar/blargh.xbm">
```

(There is no closing tag; this is just a standalone tag.)

This tag can be embedded in an anchor like anything else; when that happens, it becomes an icon that's sensitive to activation just like a regular text anchor.

A suggestion for alt text.

Daniel N. Wood (dwood@cory.eecs.berkeley.edu)

-

I would like to suggest an addition to the FIG tag. (And perhaps the IMG tag.)

It seems to me that there are two common scenarios for alt text.

1) The alt text is a perfect substitute for the image. For example:

Replace IBM's logo with the word IBM.

Alt text for some sort of fancy graphical title or headline.

A set of hyperlinks which duplicate the function of an image map.

2) The alt text describes the image. For example:

A photo of me.

An image map that is a _real_ map.

Charts or figures.

Wouldn't it be valuable to distinguish between these two cases?

This would allow a more advanced 'delayed image loading' for people on slow links or strange hardware. I am sure there are other uses as well.

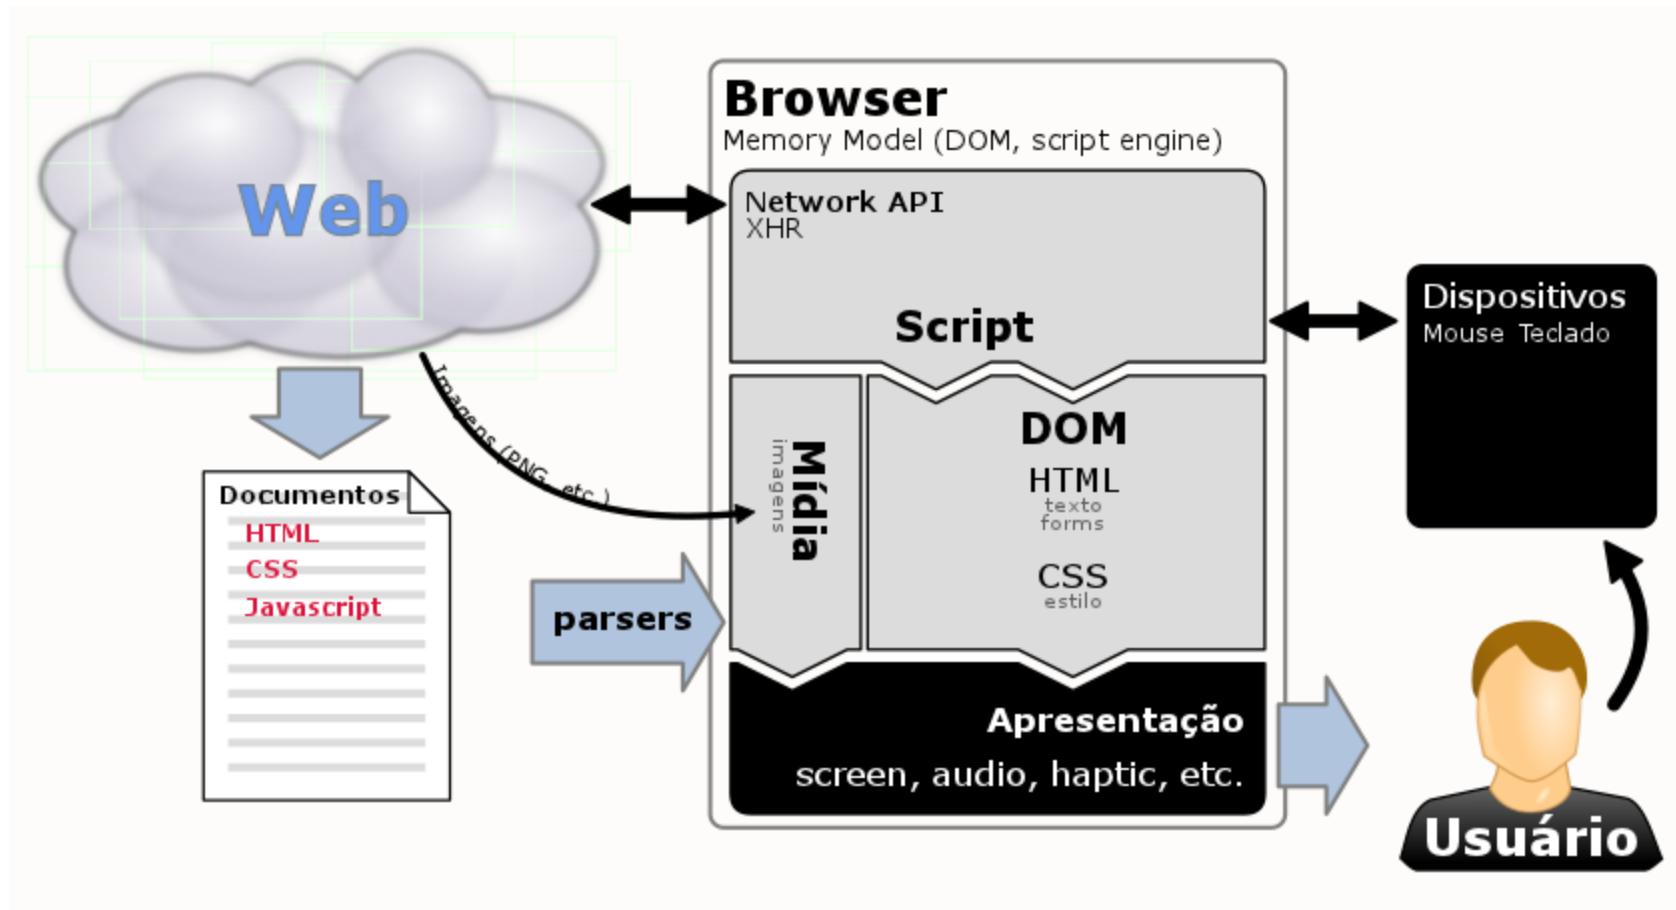

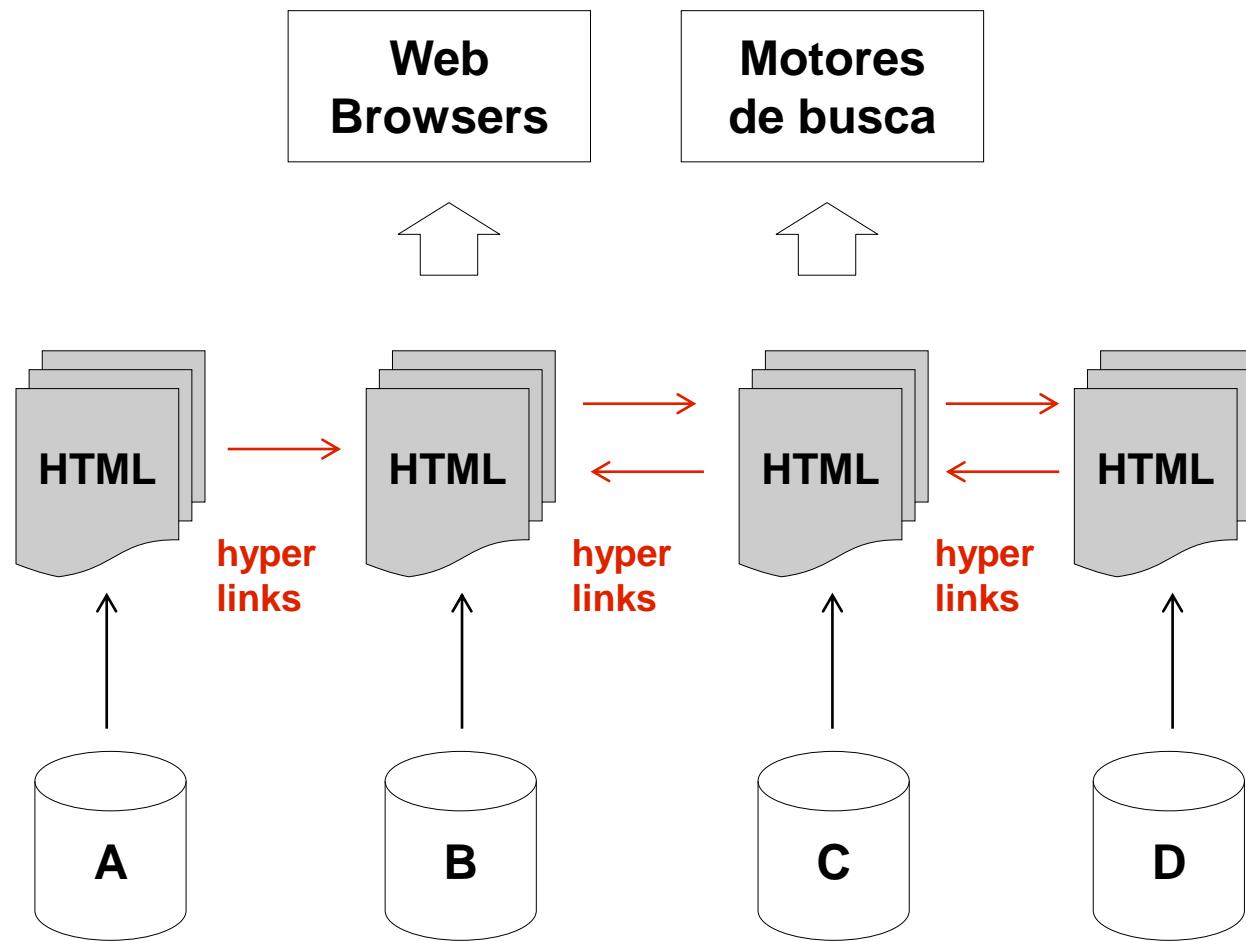

Welcome to W3C Discussion Services

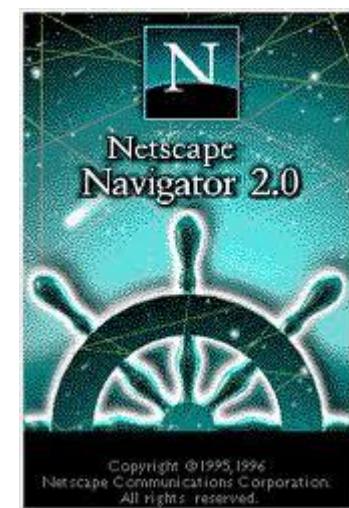

The W3C list archives include the following:

admin@w3.org

A screenshot of the Cadê? website. The main header features the text "cadê?" in a large, stylized blue font. Below the header are navigation links: "Novos Inclusões", "Cadê? Você | Download | AQUI!", "Cadê? Livros | Cadê? EnglishTown", "Consulta", "Busca", "Opcões de busca", "Cadê? Mail | Veja", and "Lojas Americanas - Clique Aqui!!!". On the right side, there is an advertisement for "EMBRATEL" and a "PUBLICIDADE" banner.

First International Conference on the World-Wide Web

May 25-26-27 1994, CERN, Geneva (Switzerland)

The Conference is over ... This page remains of interest as a report and as pointer to the next ones.

The Third one will be:

[WWW Spring '95](#)

Darmstadt, Germany, April 10-14 1995, organised by the
[Fraunhofer Gesellschaft](#).

The second conference was held in the US:

[WWW Fall '94: Mosaic and the Web](#)

Chicago, October 17-19, organised by [NCSA](#) and CERN.

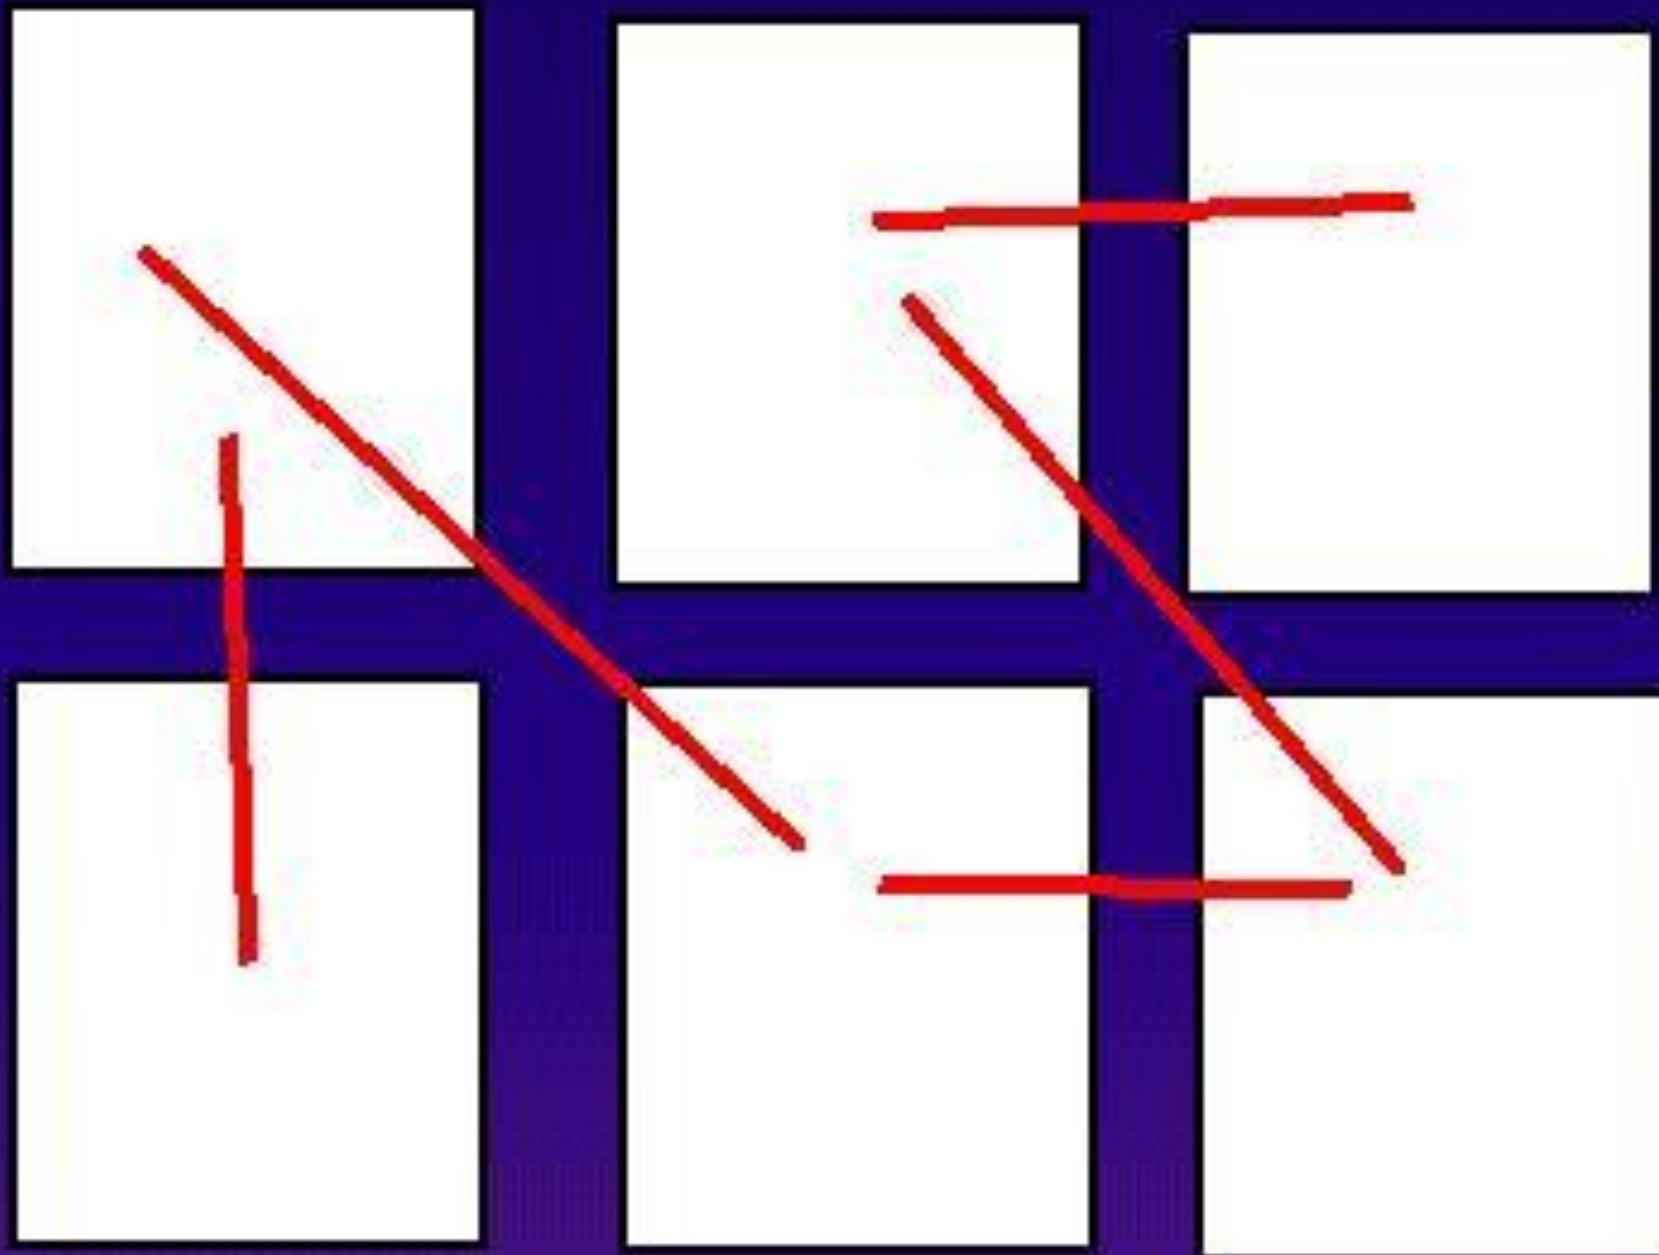

The three days in Geneva were attended by 380 [participants](#) from all over the world.

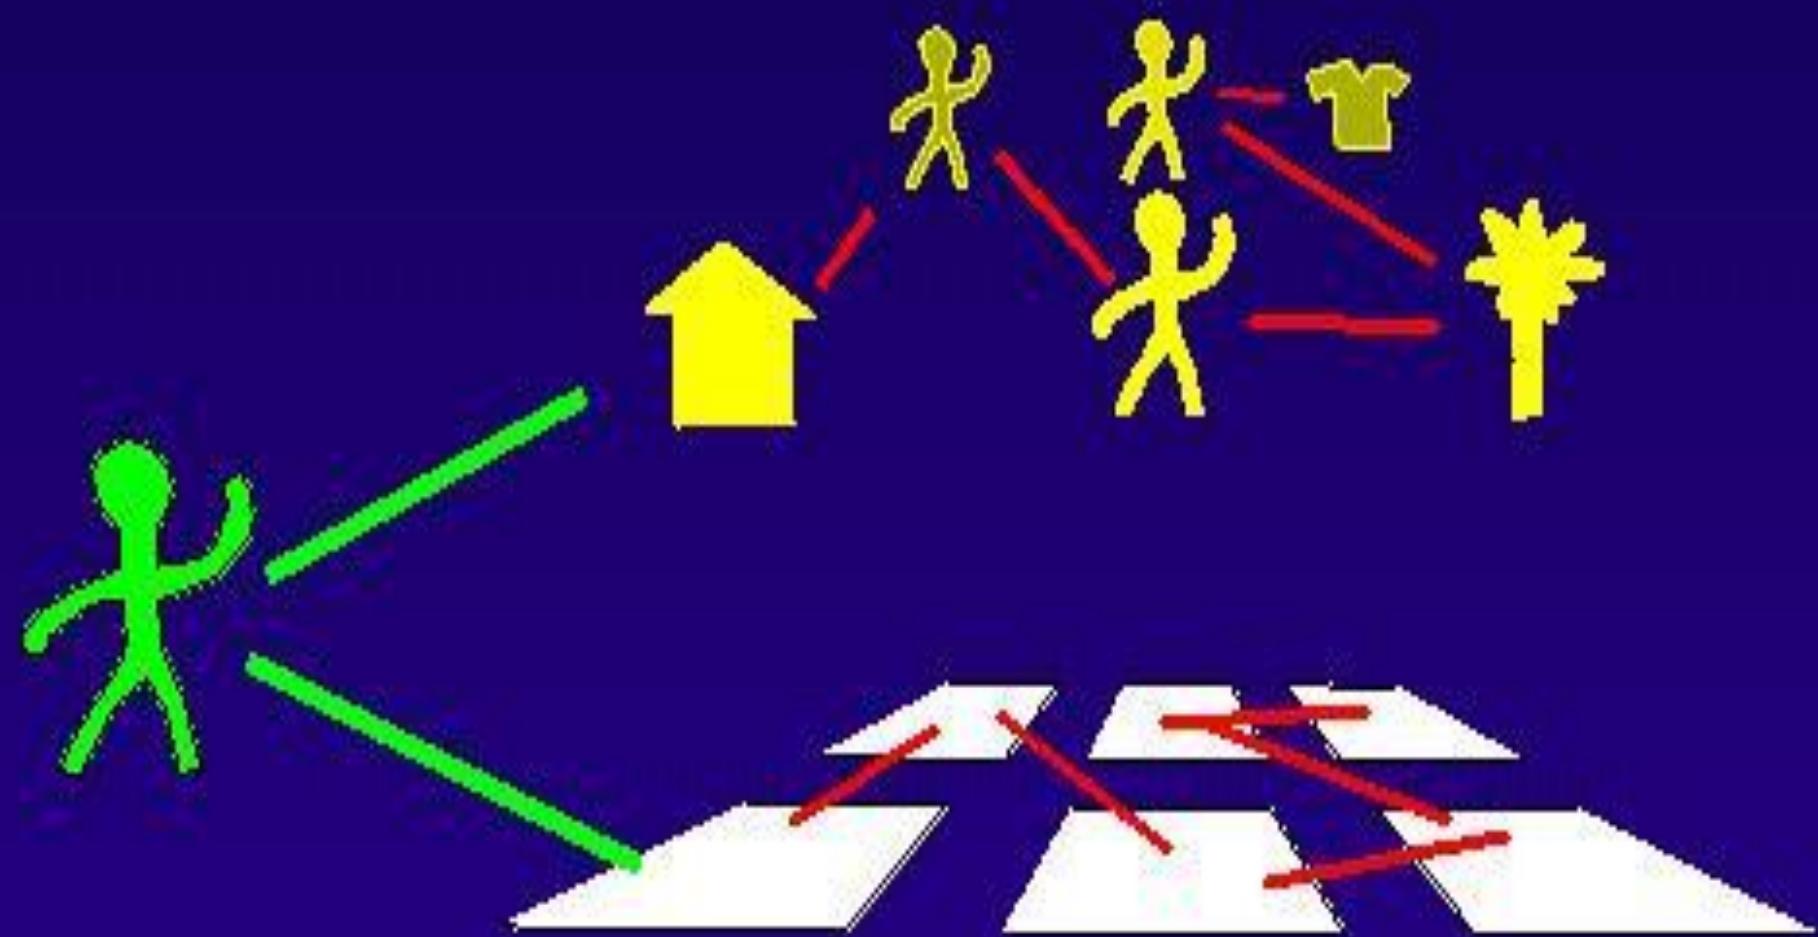

My thanks go to many [people](#), and also to many [institutes and companies](#), especially to the co-organisers from the [CUI](#) (Centre Universitaire d'Informatique), Oscar Nierstrasz and Bertrand Ibrahim.

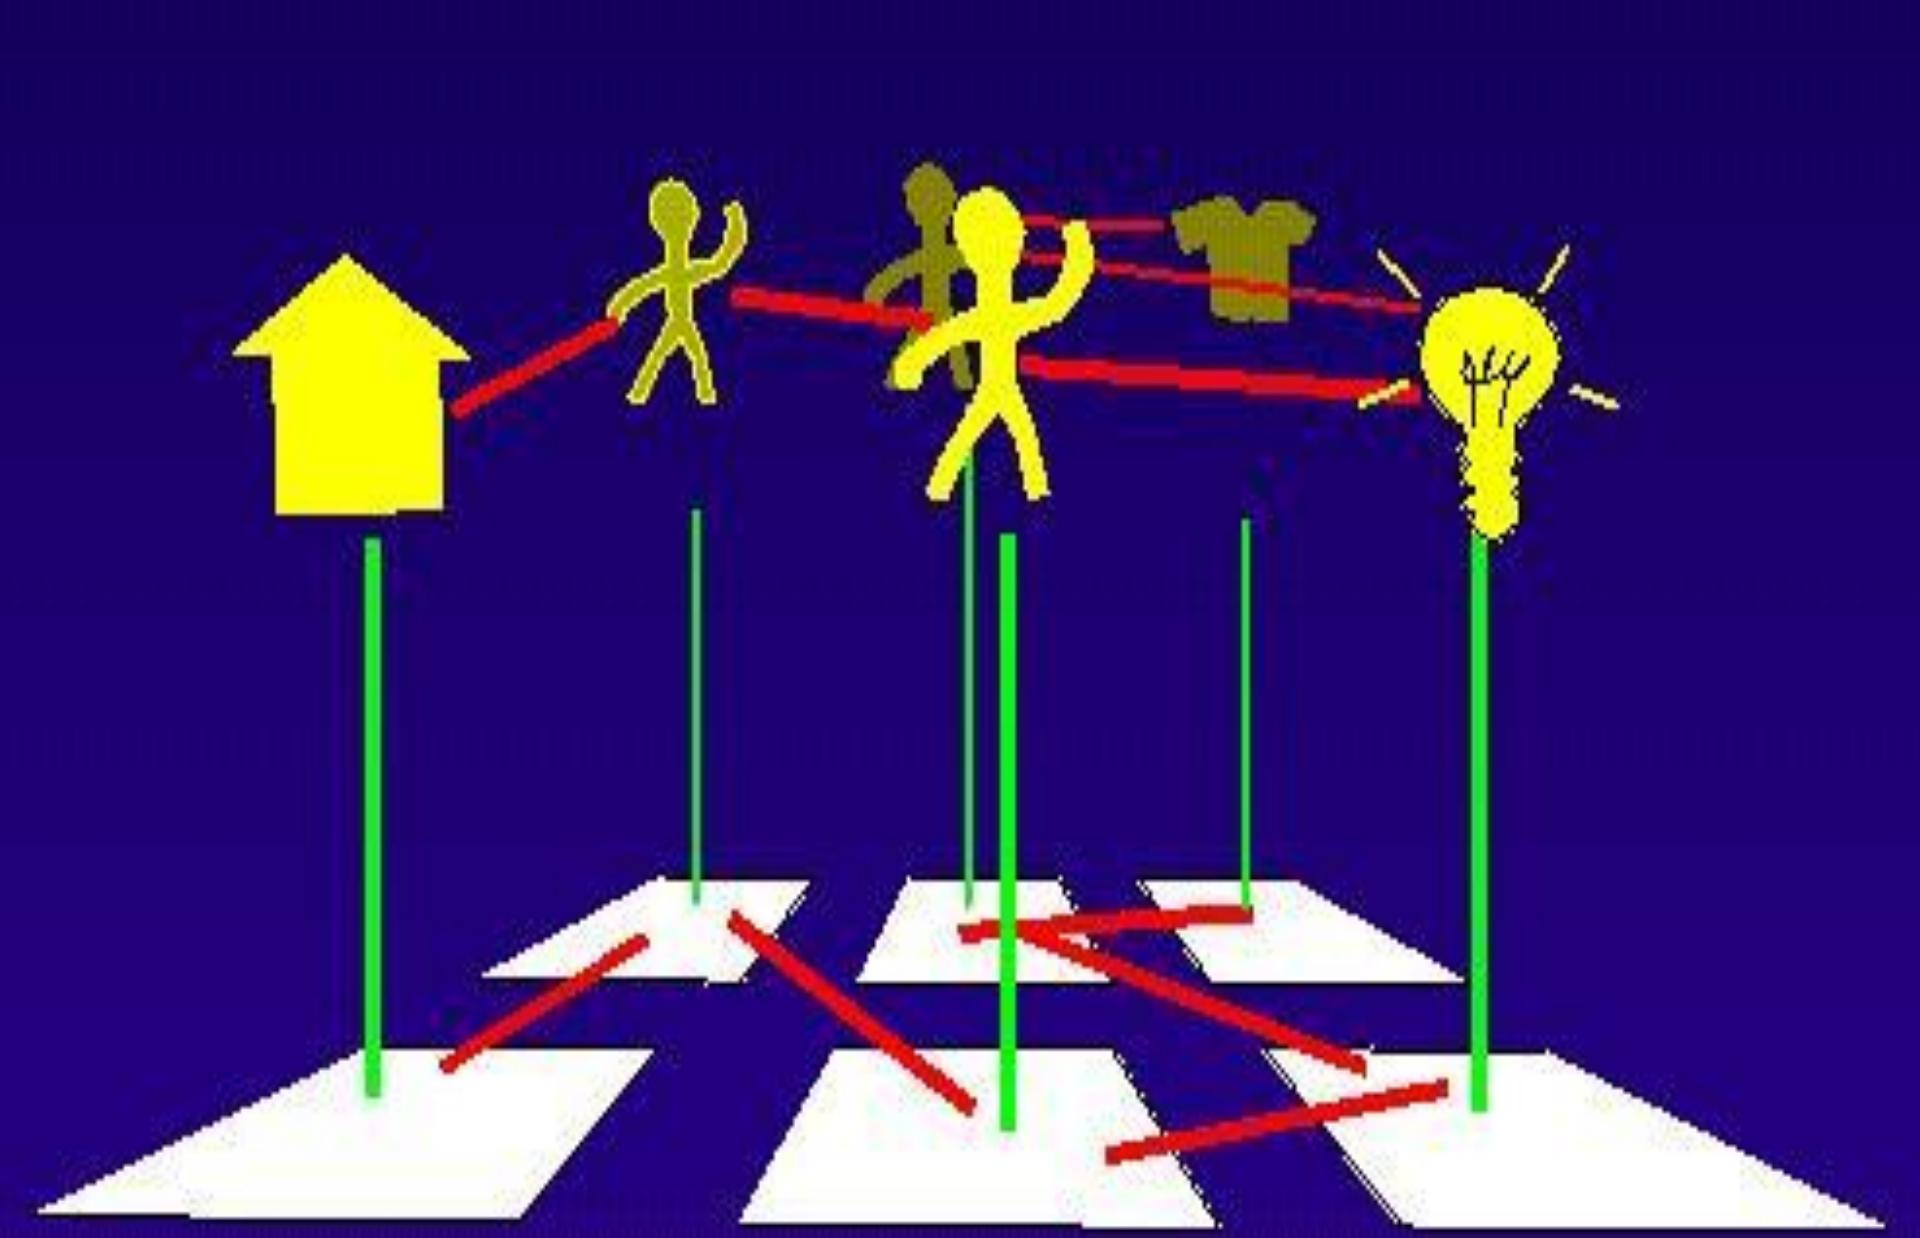

There were 49 formal presentations, 11 [workshops](#) and many discussions going on in parallel. The [proceedings](#) will be published in two forms, and until then, the [preliminary proceedings](#) are available for inspection.

The Best of WWW [Awards](#) were handed out at the Conference Dinner.

The conference closed on Friday afternoon with a general [panel](#) discussing issues for the future.
